# Ecolastic EPDM Surface Maintenance Guide

As a general rule your new Ecolastic EPDM Granules surface is maintenance free.

However, due to the porous nature of the material and depending upon surrounding conditions, the surface could benefit annually by the high pressure hosing of water to dislodge and force through the surface any ingress of dirt or foreign matter that may have built up over a period of time.

Where dust and/or sand is a particular problem, the use of an industrial vacuum cleaner as necessary could remove any covering that has formed and where a porous sub base has been incorporated a detergent wash, brush and vacuum would in most cases revitalize the surface substantially. It is advantageous to add an anti-fungicidal agent to the water during this operation.

Localized soiling such as oil, chewing gum and spray paints etc., should be treated very carefully to avoid damage to the rubber crumb.

Under no circumstance would Fairmont Industries Sdn. Bhd. recommend the use of solvent-based stain removers on their Ecolastic EPDM surfaces.

Chewing gum can be removed by carefully chipping away with a blunt knife taking great not to damage the rubber crumb.

NB: Please take note that the results shows based on laboratory scale test. The above information is believed to be correct but does not purport to be all inclusive and shall be used only as a guide.
