

Airethane 1000 series

Prime. Bind. Seal. Coat.

Single component polyurethane primer and binders for wet pour installation. **Airethane 1000 series** is available in a few different grades specifically modified to cater to the different requirements of each individual installer.

Airethane 1100

Airethane 1100 is suitable for use as a primer in the installation of safety surfaces acting as a key coat between the concrete/asphalt base and elastic layer. The use of **Airethane 1100** improves the bond and prevents delamination from the finished surface.
Packing: 180kg black drum

Airethane 1200

Airethane 1200 is a solvent-free, single component, moisture-curing binder based on polyether polyols. It is suitable for use as a binder in the in-situ installation of safety surfaces, jogging tracks and synthetic running tracks using rubber granules from tyres or EPDM. This grade is recommended for the elastic layer of the surface.
Packing: 205kg black drum

Airethane 1204

Airethane 1204 is a solvent-free, single component, moisture-curing binder based on polyether polyols. This grade is recommended for the wearing layer of the surface due to its superior bond strength.
Packing: 220kg red drum

Airethane 1205

Airethane 1205 is a solvent-free, single component, moisture-curing binder based on polyether polyols. This is an improvised grade recommended for both elastic layer and wearing layer of the surface.
Packing: 205kg black drum

Airethane 1300

Airethane 1300 is a 100% solids, aliphatic isocyanate based, moisture-curing binder. It exhibits excellent color fastness and exterior durability allowing use of light colored EPDM granules without the objectionable yellowing encountered when using MDI (Methylene diphenyl diisocyanate) binders.
Packing: 200kg blue drum

Natural colours may vary from the actual product when viewed on print/screen mode. Samples are available upon request. We strongly advise the sighting of actual samples before selection is made as Fairmont will not be held responsible for variation in the colours selected and the end product received.
